

CEWS – STUMP THE CONSULTANT

December 13, 2017

Q - I have a template with two data views I want to move one from the bottom to the top. How do I do this?

A - You should be able to drag and drop data views from within the template, you would likely need to wipe the formatting before making this adjustment, however.

Q - Template Manager, can you pull data from multiple cubes?

A - You can! However, to do so, you will need to put a data view from the two different cubes onto the same template in template studio.

Q - How do you sort data in ad hoc or template studio?

A - you can sort data (highest to lowest), but it requires a custom named set using MDX. You may need to reach out to your IM or consultant you have worked with in the past to create this.

Q - What is the DPM (payroll) version of the version control best practice demonstrated?

A - DPM is slightly different in that you do want to, in fact, have a separate version for each scenario. However, when you move these to your primary financial cube, they should all go to a single version.

Q - The Infoflex process is an append not an overwrite?

A - We typically run the infoflex as an overwrite when you are copying your Budget to a FINBUD

Q - In the FINPLAN, how do you differentiate between the PLAN of different years?

A - When you are copying it you select the year you want to copy plan for and your time dimension will allow you to have a single FINPLAN version and then look at it for 2018 or 2019 etc.?

Q - When we add new properties and accounts, they are not also added to DPM cubes, how can we fix this?

A - This could be because the dimensions are not shared between cubes. For example, if you are adding in a new account in the Accounts dimension in the finance cube and the finance cube is not shared between DPM Cubes, it will not automatically update with that new account. To see which dimension is shared, you can go to a Model Manager-->Accounts Dimension and look at the bottom of the screen where it says the dimension name to see if it has '(+1)' in front

of it. That is to show if the dimension is shared. If you click on that, it will show what cubes the dimension is shared in.

Q - Can notifications be sent to non-users?

A - Notifications are only sent to users set up in Prophix because it picks up the emails from security manager.

Q - Can u use a dimension more than once in edit layout?

A - Dimensions are only used once in either rows, columns, and pages unless it is an alternate hierarchy of that dimension such as Time Dimension (Time and Time.Months), these two can be used in two separate areas on the Layout as displayed.

Q - how to create an alternative hierarchy for time dimension for Month and Quarter?

A - This functionality is built into Prophix, so you don't need to do anything to create it. Depending on your model (as long as it is monthly) you should be able to this when you open the edit layout button now.
